GitHub : https://github.com/yazankh98

I am a dedicated full-stack developer with a degree in Informatics Engineering from Ittihad Private University. I have a strong foundation in both front-end and back-end development, with proficiency in HTML, CSS, JavaScript, and libraries like React. I am well-versed in tools such as Bootstrap and Git/GitHub.

On the backend, I specialize in PHP and MySQL, with experience developing scalable web applications using Laravel. My expertise includes database management, API integrations, and server-side logic.

Additionally, I have a strong background in graphic design, proficient in Photoshop and Illustrator.

Education

Relational databases / Web Development / Unit Testing / Object-Oriented Programming / Material design / REST API / HTML / CSS / JavaScript / React - Vite / Bootstrap / Tailwind / Php / Laravel / MySQL / Git & GitHub / Photoshop / Illustrator

---

Projects

- B-World - React-Vite - (API)

  This React-based website is focused on books, with all data dynamically fetched from an API. It features a sleek and modern interface designed using Material-UI, offering an enhanced user experience, including a dark mode option. The project leverages cutting-edge technologies to deliver a feature-rich and visually appealing e-commerce solution.

https://project-7-react.vercel.app/

- Organick - frontend

Organick is a front-end website designed for a Vegetable Store, offering users a seamless shopping experience. The website features a clean and intuitive interface

https://yazankh98.github.io/project-2

- Travel - React-Vite

This website provides users with essential information about countries and travel destinations. It features a user-friendly interface for exploring details such as geography, culture, and key attraction

https://project-7-react.vercel.app/

- Blog - Back-End Laravel Blade And Dashboard for Admin

This is a full-stack Laravel blog platform with an admin dashboard for managing articles, users, and comments. Users can browse articles, leave comments, and explore content by category and tags. The website uses MySQL for database management and ensures a smooth experience for both readers and administrators

https://github.com/yazankh98/blog

- portfolio - Full Stack With Dashboard For Admin To Update Or Delete Info (Laravel+React)

This is a full-stack portfolio website built with Laravel and React, showcasing my projects and skills. It features an admin dashboard that allows easy management of content, including the ability to update or delete information. The platform demonstrates my proficiency in both backend and frontend development, providing an interactive and dynamic user experience

- Generate QR Code - Front-End Application to Generate QR Codes for any URL or WhatsApp number

I created this website out of the need to generate QR codes. After researching QR code generator websites, I found that many of them are not free, require a monthly subscription, or only offer limited free usage. Therefore, I built this website with a simple interface and high responsiveness to convert URLs and WhatsApp phone numbers into QR codes
